Greg Avery

<u>Dynamic Home Page Written Plan</u>

1. create an AJAX request by using the Fetch API in main.js file

2. add a handle for when you can't connect to the page (error 404)

3. add some ux/ui to the handle so then the page is not blank when the user encounters an error

4. finish off by adding the rest of the content to the page from the classData.js file using a function
